

DeNovo is the proud recipient of the award for the Best Decarbonization Project.

Our 100% 'green' powered Zandolie Platform has been recognized at the 2022 Energy Conference Annual Awards because of our persistent commitment to innovation and excellence. Executed through a multi-disciplinary approach, this award is testimony to DeNovo's bold embrace of the energy transition, and the remarkable collaboration of both DeNovo staff and contractors to deliver this project safely, within budget and on schedule.

In addition to being fully powered by renewable resources, the Zandolie deck, jacket and main module were all fabricated and assembled in Trinidad and Tobago – a clear demonstration of our quest to maximize local talent and resources, while finding safe and effective alternatives to project execution, and non-traditional approaches to reducing our carbon footprint.
